

CELL PHONE RETRACTABLE EARPIECE

ABSTRACT OF THE DISCLOSURE

A cell-phone retractable earpiece has a phone-wire reel (1) in a reel pocket (2) on a cell phone (3) that is attachable to a user. The phone-wire reel is wind-tensioned to wind the phone wire onto the phone-wire reel in opposition to pulling the phone wire and locking the reel in a desired unwound mode. The earpiece is attached to a user's ear (9) with an ear hook (7) having a sound reproducer (14) with a sound conveyer (15, 19, 20) into a user's ear (9). A microphone retractable appendage (26) is extendible from the phone wire to a position proximate a user's mouth (18). An optional ear clamp (21) can be employed for firm attachment of the earpiece to the user's ear.
